2019-2022 Community Health Assessment – Preliminary findings

Request for community feedback – February 2, 2020

The Columbiana County Health Partners (CCHP), are seeking input from the community on the preliminary findings of the 2019-2022 Community Health Assessment. The health assessment was completed following a detailed process and input from the community is essential in establishing a final plan that is useful and meaningful to the community. Please take some time to review the assessment preliminary findings below or the complete assessment on the agency website and provide feedback directly to Health Commissioner, Wes Vins at 330-424-0272 ext. 126 or by email at wvins@columbiana-health.org. Thank you for your participation.

- MAPP Phase 4 (Identifying & Prioritizing Issues): The Partners used the data findings by key issue to identify, develop and prioritize a list of strategic health-related issues facing the community. This process included the development of a list of the most significant health issues identified during the CHNA process, which was used during a nominal objective voting process by workgroup members. To review the CHNA in its entirety, please visit the CCHD website, (columbiana-health.org)

The Partners completed a ranking exercise for each issue identified, giving a score to the three prioritization criteria of: (i) magnitude of problem, (ii) seriousness of consequence, and (iii) feasibility of correcting. Scores for each issue were compiled to yield an average score, which was used to rank order the final priorities. Based on the highest scores, the top eight CHNA issues were prioritized as:

| Prioritization of Key CHNA Issues | Average Score |
|---|---------------|
| 1. Chronic disease | 26.4 |
| 2. Mental health/trauma | 24.0 |
| 3. Drug dependency/abuse | 23.7 |
| 4. Obesity | 23.3 |
| 5. Preventive medicine | 23.3 |
| 6. Access to care | 22.4 |
| 7. Tobacco use/vaping | 21.6 |
| 8. Youth unintentional/intentional injury | 21.0 |
